# Quality is manufactured

Avinent has demonstrated from the outset that it demands the utmost rigor and guarantee of quality in the creation and manufacture of all its solutions. Thanks to the dedication of its entire staff, in 2020 it was one of the first companies in Europe and the first in Spain to be certified pursuant to the new European Medical Device Regulation (MDR).

This new regulation is far more stringent than the previous Directive, with the main purpose of guaranteeing patients' safety. The whole team of Avinent professionals is aware that the value contributed to the quality of our products and safety in applying them to treatments derives in the patient's protection and peace of mind.

Additionally, the quality concept is implicit throughout our entire production process, from manufacturing, comprising the product's safety and functionality, to the installations or regulations specific to each country, and is applied it from start to finish with our 100% control methods.

This meticulous process is rounded off with scientific support, clinical monitoring, and after-sales. In this regard, we benefit from the assistance of universities and research centres where Avinent finds all the support it needs for scientific studies to be carried out.

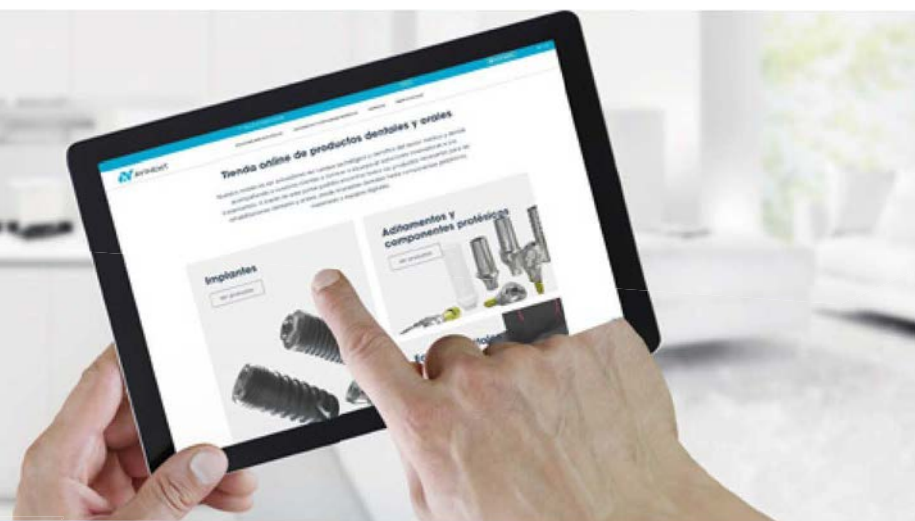

**Avinent works from within and on the outside to offer solutions ready to be the most effective and competent on the market.**

## Support from start to finish

Avinent offers customers support from start to finish. From the very first moment contact is made, the customer service team offers good advice, a value the team provides by helping the customer choose the best product or solution, working hand in hand with the commercial team to be extremely attentive regarding crucial aspects such as the speed of order deliveries.

At the same time, the technical support teams are ready to offer accompaniment from start to finish in the process you require, whether of digitalisation using digital equipment, or a CAD CAM process of restoration. Always with a friendly, personal approach so you can rely on us being at your side with everything you need

Meanwhile, Avinent's eShop is designed for customers to be able to make their purchases easily, swiftly, and intuitively. It places at your disposal the complete portfolio of prosthetic components with all the connections of the market's most relevant brands so that the solutions you need for your rehabilitation can be obtained in just one click, within brief delivery periods and with international deliveries.

The eShop also contains a customer area where you can manage all your invoices, returns, save your shopping carts so you can repeat them in future and track the status of your orders and deliveries.

Everything is centralised in one place to make buying from Avinent simple and easy for you

## The family prosthetic abutments of Avinent

Thanks to its wide catalogue of components, Avinent CAD CAM has the capacity to take on the entire process of scanning, design, and manufacture of prosthetic structures, based on all available digital systems. The company has an extensive digital library for the most advanced design software developed for the majority of brands and types of connections on the market.

Avinent's vast experience in the mass-production of pieces and the mechanical and fitting trials that the components are subjected to, all guarantee an optimum fit for an absolutely secure restoration thanks to a production process that is 100% controlled from start to finish.

The Constellation product range comprises:

## Scan abutments

Avinent scan abutments use medical grade PEEK as the material for the body of the abutment, with good radiopaque scan properties, eliminating the need to use spray. The base is made of stainless steel, which allows for perfect visibility in periapical x-rays.

The anti-rotational geometry of the connection guarantees a correct insertion and a very good fit. Our scan abutments are unique as they can be sterilised in an autoclave, allowing them to be used multiple times. Avinent's CC and CC.I connections offer a choice between abutments for single or multiple restorations.

## Avinent digital libraries

To offer an integrated digital solution that brings the digital flow closer to dentists and prosthetic laboratories, Avinent also has an extensive digital library for the most advanced design software. The libraries have been developed for the majority of brands and types of connections on the market, with a multi-platform system open to all scanners.

You can consult our online catalogue of digital libraries on our web page:

**[cadcam.avinent.com/en/digital-libraries/](http://cadcam.avinent.com/en/digital-libraries/)**

For more information, visit our website [cadcam.avinent.com](http://cadcam.avinent.com) or contact with our support team.

## Impressions

For open tray and closed tray. Screws are anodised depending on the implant platform.

## Analogs

For printed or plaster models, essential for ensuring a correct finish of the prosthesis. Although the component body may be identical, a special connection will be used according to the specific implant system that is being worked on. We use precision machining to produce our analogs with the same tolerances as the implants and to achieve maximum precision.

## Cemented prosthesis

If your idea is to rehabilitate with a cemented prosthesis, you will use an abutment for cementing that will allow it to be treated as if it were a natural tooth and achieve a perfect final aesthetic in the rehabilitation. Within cemented prostheses, we have:

- 1 **Straight conical abutment**
- 2 **Angled conical abutment**

# Titanium bases

Avinent titanium bases are designed with several gingiva heights to preserve the maximum amount of soft tissue and achieve emergence profiles that are perfect for an optimum aesthetic result. Avinent has the libraries needed to use the titanium

bases in the main design software and for the majority of implant connections on the market. Avinent titanium bases are also available for single or multiple restorations. Within the family of Avinent titanium bases, we find 3 types:

1

## Standard titanium bases

The first generation of Avinent titanium bases. Their different gingival heights mean it is always possible to find the best solution for every patient.

» Screw connection screwdriver original

2

## Cuttable titanium bases

These are the second generation of Avinent titanium bases. They are gold-dipped to improve mimetisation with the soft tissues and moreover, their cementing height is customisable, which means it can be cut to fit the base to the required type of rehabilitation.

» Screw connection screwdriver original

3

## Angulation correction titanium bases

With upper profile and anatomical design, they are ideal for anterior and perfectly functional for posterior sectors. This integral system is designed with two anti-rotation planes and allows for channels with an angulation of up to 30°. Additionally, as with the high-profile titanium bases, they have a cementing height that can be cut for a complete fit with the restoration to be made.

» Correction angulation system to 30°, with G2 screwdriver that provides for a maximum recommended torque of 30 Ncm

Plus, we also have the conical titanium bases, designed to be placed always over transepithelials. It is a special interim phase that allows cases with a lot of divergence to be treated.

## Screws

Avinent designs different types of screws for each case in which they are used. Each screw is specially designed for the implant system in question and must be used with its original screwdriver.

## Screw-on prosthesis

Perhaps your idea, on the other hand, is to have a rehabilitation with a screw-mounted prosthesis as this is one of the most commonly used thanks to its recoverability and ease of maintenance. Within screw-on prostheses, we find:

### 1 Temporary abutment

(hexagonal and cylindrical):  
It is a component for direct connection to the implant, designed for provisional use in the prosthetic restoration and to replace teeth. Available in Titanium and PEEK.

### 2 Catable abutment

This is a component for direct connection to the implant and is used at present for its versatility in the making of all types of prostheses, irrespective of the implant's position. It is designed for provisional use in the prosthetic restoration and to replace teeth.

## Transepithelial abutments

Transepithelial or transmucosal abutments help us to produce a type of prosthesis screw-mounted on abutments that allow the connection of the prosthesis to be taken to the paragingival level, distancing the micro-gap and crown-abutment from the bone margin while reestablishing the biological width towards the apical, achieving an optimal mucous seal. With the complete necessary range of attachments, in addition to comfort caps, for protection of the abutment during immediate loading.

Avinent offers transepithelial abutments with different neck heights that allow the abutment to be fitted to the thickness of the soft tissue, achieving an improved surgical efficiency and exceptional aesthetic results, from 0.5 mm to 5 mm, supplied in straight and angled versions (17o, 24o and 30o). These different heights and angulations allow us to solve the most compromised cases successfully, especially in multiple immediate prostheses

### Accessories

We also have a wide portfolio accessories for implants and components that complements the offer of attachments. With specialty screwdrivers and multiple other solutions, we make sure Avinent can offer you everything you need to carry out your restoration from start to finish.

### Premills

Avinent and other brands

## Avinent Premills Production Kit

Avinent has developed the Pre-mills Production Kit to make the work of its customers easier and more efficient. The kit contains everything you need to operate your milling equipment, including the possibility of producing up to eight titanium or cobalt chromium units at once.

The Avinent Pre-mill Production Kit comes in a customized box with all available accessories and also incorporates a USB with the perfect milling strategies to avoid errors from day one.

The catalog of Avinent CAD-CAM components has more than 60 different pre-mill connections available, in either titanium or cobalt chromium, so that you can conduct all your work without exception

- Up to 8 units to manufacture **at once**.
- **High capacity** and fast production
- **From CAD to CAM:** Developed using an integral approach of a fully digital process
- AVINENT Milling Strategies are developed to ensure a **high quality emergency profile**
- **Available for** imes-icore CORiTEC 350I, imes-icore CORiTEC 650I and DMG milling machines.

### Remember that:

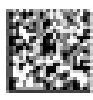

\* An extra adapter is needed to use the Pre-mill Production Kit for DMG milling machines.

## Fulfillment of labeling requirements

The products are supplied with the labelling and instructions to guarantee a safe and correct use of the product according to its intended application.

The product's labelling content has been established pursuant to the regulatory requirements of (EU) Regulation 2017/745 and standards applicable to medical devices.

The following symbols are included:

	Manufacturer
	Date of manufacture
	Batch code
	Reference number
	CE marking for class I devices
	CE symbol for class Ir, IIa and IIb devices
 <a href="http://ifu.avinent.com">ifu.avinent.com</a>	Consult Instructions for use
	Non-sterile
	Do not reuse
	Unique Device Identifier
	Data Matrix (UDI - Unique Device Identifier carrier): (01) 08435452ZZZZZZ (Número UDI-DI - GTIN) (10) AVXXXXXXXX (Número de lote) (11) YYMMDD (Fecha de fabricación) (240) RRRR (Número de catálogo)
	Identified the product as a medical device
Rx only	(For the USA only) CAUTION: Federal law restricts this device to sale by or on the order of a physician
